**Angela Campisi Named Public Relations/
Marketing Assistant at Acoustiblok**

Tampa, Florida – Acoustiblok, Inc. has announced that Angela Campisi has been named Public Relations and Marketing Assistant for its Tampa headquarters.

Campisi, a native of Tampa, is a 2008 graduate of the University of South Florida (USF) where she earned a bachelor's degree in Fine Arts. She previously worked in public relations and marketing for Tampa-based Busch Gardens, Kamans Art, and Image Depot. Campisi also teaches ballet at Lisa's Dance Studio in Tampa.

Acoustiblok, Inc. manufactures and distributes **Acoustiblok®**, its revolutionary sound abatement material and aerogel-based **Thermablok®** insulation material. UL approved Acoustiblok transforms acoustical energy into inaudible friction energy in a process sometimes referred to as "isothermal adiabatic". Just one thin 1/8 inch layer of acoustiblok in a standard stud wall can reduce more sound than 12 inches of concrete.

Developed in conjunction with NASA, Thermablok's aerogel insulation material greatly decreases energy waste by reducing thermal bridging in walls. US Department of Energy and J&M Laboratory tests reveal that adding just one, ¼-inch (60mm) strip of Thermablok® aerogel on one edge of the metal studs in a wall before drywalling can increase the R-value by over 40%! NASA's nanotechnology Aerogel is the highest insulating material in existence.
